

Shawn Larkin Final Project 2018 CCAC

Adding Machine

https://github.com/slark09/cit111_ccac/tree/master/NetBeansProjects/AddingMachine

This project was designed to learn GUI and the basic principles of a JFrame and practice using the NetBeans Palette Feature. The next step in building this would be learning how event handling works and assign a list of events to make the machine function as a simple calculator. This program current

functions include, displaying, adding and clearing text, exit. Refer to this link for questions
